

# Canadian Hemlock

**Botanical Name:** *Tsuga canadensis*

**Foliage:** Soft Green needles attached to arching branches.

**Height & Shape:** Its soft needles are medium to light green and it has a graceful pyramidal habit (growth pattern). This plant is a good choice for a specimen plant, and it offers itself as a breathtaking "*Living Fence*" screen.

**Planting:** Will grow in dry or moist soils, and is very tolerant of shearing. Can be used as a screen.
